

Raphael Maris Ugboko

AI & Digital Transformation | Enterprise Application Integration | Data & Analytics
• Clemson, SC • ralphugboko@gmail.com • <https://www.linkedin.com/in/raphael-maris-ugboko/> • [Website](#)

PROFESSIONAL SUMMARY

Ph.D. researcher in **Human-Centered Computing** with an M.S. in Computer Science and hands-on experience across **enterprise application integration, AI-enabled transformation, data analytics, APIs, cloud-connected systems, and technical consulting**. Experienced analyzing business processes, translating ambiguous stakeholder needs into requirements, evaluating application and data workflows, and developing **roadmaps, architecture recommendations, dashboards, and client-ready deliverables**. Technical background includes **REST APIs, SQL, JavaScript/TypeScript, PostgreSQL, Microsoft Copilot, OpenAI Codex, LLM APIs, Oracle Primavera Unifier, Oracle Integration Cloud, Power BI, and cloud-native software development**.

EXPERIENCE

Presence Lab, Clemson University

Research Assistant / AI Systems Developer

Clemson, SC

January 2026 - Present

- Build and enhance **Quizzibility**, an AI-powered software platform using **React, TypeScript, Next.js, Supabase, PostgreSQL, REST/LLM APIs, and cloud-based application services**, improving instructor workflow efficiency by **45%+**; Apply **JTBD and RICE prioritization** to usability and accessibility findings, improving task completion rates by **30%+**.
- Analyze user workflows and application dependencies to translate ambiguous needs into **technical requirements, implementation plans, data flows, and prioritized solution recommendations**.
- Designed LLM-powered submission analysis workflows that integrate application data with AI models to identify patterns and misconceptions, improving feedback cycles by **50%+**.
- Use **OpenAI Codex and Claude Cowork** to read, debug, explain, and modify large software codebases, trace system dependencies, and accelerate implementation planning by **40%+**.
- Implement controlled product experiments using feature gating, **A/B testing, cohort analysis, and behavioral funnels**, translating quantitative findings into data-driven recommendations.
- Research **responsible AI, automation bias, AI over-reliance, and human-AI interaction**, translating findings into practical recommendations for trustworthy AI-enabled applications.

DC Water

PMIS Analyst

Washington, DC

May 2026 – August 2026

- Assessed business processes and enterprise application workflows within **Oracle Primavera Unifier**, identifying integration, reporting, data-quality, and automation opportunities across project-management systems.
- Designed an **AI-powered enterprise reporting architecture** using **Microsoft Copilot, REST APIs, Oracle Primavera Unifier, and Oracle Integration Cloud**, reducing manual reporting effort by **60%+**.
- Mapped reporting data sources, application workflows, and integration requirements to define how project data could move securely across enterprise systems.
- Conducted stakeholder discussions and requirements-gathering sessions to identify business challenges and translate them into **technical requirements, workflow improvements, and solution recommendations**.
- Built executive dashboards spanning financial performance, payments, schedule, change management, and closeout readiness, improving decision visibility by **35%+**.
- Analyzed project data and business processes to identify incomplete records and misleading indicators, reducing rework by **50%+**; **Developed technical documentation**, workflow guidance, and AI-assisted knowledge resources using **Microsoft Copilot and Microsoft Office**, reducing onboarding time by **40%+**.

KPMG Nigeria

IT Program Manager, Digital Banking & Payments Platforms

Lagos, NG

Oct 2021 – Jun 2023

- Led digital transformation initiatives for **enterprise banking and payments platforms serving 8,000+ users**, working across clients, technology teams, vendors, and business stakeholders.
- Analyzed business requirements, operational processes, system constraints, and technology dependencies to define **program roadmaps and transformation recommendations**, contributing to **15% lower operational costs**.
- Translated client needs into structured requirements and implementation priorities for enterprise technology initiatives across complex banking environments.
- Developed **Power BI, SQL, and Excel** analytics and reporting solutions that reduced manual reporting effort by **60%+** and enabled data-driven recommendations to leadership.
- Coordinated requirements, risks, issues, and dependencies through **Jira and Agile delivery practices**, reducing escalation delays by **35%+**; Prepared executive presentations, status reports, business insights, and stakeholder communications to support technology transformation decisions.
